Know your security readiness score

The Local Government Security Assessment gives you insight into every possible area where municipal services and city operations could be disrupted by cyberattackers. You’ll receive a Security Assessment Report that includes a Security Readiness Score giving you a simple, at-a-glance summary of where you stand and a detailed, easy-to-follow path to improving your city or town’s cybersecurity.

The plan includes Cyber Navigator visits to your offices and polling locations where they conduct a thorough Local Government Security Assessment focused around your processes. You’ll also receive the advantage of our industry-leading cyber intelligence services to find existing and potential cyberattacks internally across your network and systems as well as externally across the Internet and Darknet.

Additionally, your staff will be assessed on their security practices and awareness, and we’ll review your processes and policies against the NIST Cybersecurity Framework, the industry benchmark for security preparedness. The assessment also includes Cyber Navigator and Chief Information Security Officer guidance on opportunities for improvement so you have a clear plan and understanding of next steps.

Includes:

- **Phase One Assessment**
  Cyber Navigators visit your locations to perform a thorough review of security best practices.

- **Threat Detection**
  Security analysts monitor your environment for evidence of cyberattack.

- **Security Readiness Score**
  Security analysts monitor your environment for evidence of cyberattack.

- **Cyber Navigator Guidance**
  Highly experience cybersecurity experts provide in-depth consulting services.

- **Phase Two Assessment**
  We’ll evaluate progress to ensure all security initiatives are aligned and effective.
